                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5, GACAGAGAAGGATCCAACAGCTCTTTTTTTTTTTTTTVN 3, CDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through two rounds of normalization to Rot = 20.0 and subtraction to Rot = 458.8. Second strand cDNA was prepared with the primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Direct Submission

                                                                                                                                                                                                                                        and mixed in equal amounts. The mixed library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded mixed library plasmid DNA was mixed with 5 micrograms PCR product representing mixed library inserts and hybridized to an Ecot of 6. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         note "Vector: psport]; Site_1: Not I; Site_2: Sal I; Fi libraries representing E10.5/12.5 pancreatic bud, E16.5 pancreas, newborn pancreas, adult pancreas, and adult islets of Langerhans were seperately constructed using SuperScript Plasmid Library kit (Life Technologies). cD was made by oligo-dT priming and size-selected by colum fractionation. Libraries were amplified once on solid support and plasmid DNA from each library was prepared support
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        adult islet"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3/); double-stranded CDNA was ligated to Eco RI adaptors (AATTCGGATCCTTG), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Source undifferentiated tissue culture cell line C2C12. Library constructed by Bob Barstead. The C2C12 cell line (available from ATCC, catalog # CRL-1772) differentiates rapidly, forming contractile myotubes and producing characteristic muscle proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          604.00

                                       The sequence is that encoding human tumour necrosis factor related ligand (TRELL). TRELL or active fragments can be included with a carrier in pharmaceutical compositions to treat cancer, autoimmune diseases or immune responses to tissue grafts, or to stimulate or suppress the immune system. It is useful to screen for TRELL receptors, by labelling with a detectable label and screening compositions for binding. Agents interfering with TRELL-receptor binding can also be screened for, can then be administered, optionally with interferon-gamma, to induce cell death or treat, suppress or alter immune responses (especially involving human adenocarcinoma cells) involving a signal pathway between TRELL and its receptor. The DNA sequence can be used in gene therapy for TRELL-related disorders in mammals (especially humans), e.g. tumours, autoimmune and inflammatory diseases or inherited genetic disorders, by introducing into cells, and expressing, therapeutically effective amounts of a vector, e.g. a virus comprising a gene encoding TRELL. It may also be of use in the preparation of prepare probes for antience therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-MAR-1997;

AAX56000 standard;
                  The present sequence encodes a human tumour necrosis factor (TNF) and lymphotoxin homologue designated Apo-3 ligand. Apo-3 ligand cytostatic activity. Apo-3 ligand can be used to induce apoptosis in mammalian cancer cells, to induce NF-kappaB-dependent transcription at to induce JNK/SAPK-dependent responses in mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          801

                                                                                The present sequence is that of cDNA clone DNA30879-1152 (ATCC 209358) encoding human pRO207 (see AAY95338), which shows homology to several members of the tumour necrosis factor family, especially human lymphotoxin (23.4%). The cDNA was identified in a foetal kidney cDNA library following identification of an expressed sequence tag with homology to human Apo-2 ligand. A claimed method for inhibiting the growth of a tumour cell comprises exposing the tumor cell to PRO179, PRO207, PRO320, PRO219, PRO221, PRO224, PRO328, PRO301, PRO526, PRO362, PRO356, PRO359 or PRO866 (see AAY95337-49), their agonists or chimeric polypeptides incorporating them. The tumour is especially a cancer selected from breast, ovarian, renal, colorectal, uterine, prostate, lung, bladder and central nervous system cancer, melanoma and leukaemia. Nucleic acids encoding PRO179 etc. are used in the recombinant production of the antitumour polypeptides.
                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to extracellular signal molecules, particularly members of tumour necrosis factor (TNF) family molecules designated as TREPA (TNF related endothelium proliferative agent). Soluble biologically active TREPA are used to treat TREPA-associated diseases, tumours or metastases. TREPA is used for inducing angiogenesis in human for promoting wound healing and for vascularising grafted tissue for successful grafting and to promote tissue grafts. The present sequence is a cDNA clone ID #690050 encoding human TREPA.

```
pDC409-LZ-TWEAK, which encodes a fusion protein comprising a growth control protein comprising a growth protein comprising a growth protein leader, a leucine zipper multimerisation domain, and the cextracellular domain of human TWEAK. The fusion protein was used in the isolation of human rEMEAK receptor (TWEAKR)-expressing clones of the isolation of human cDNA library. The TWEAK protein is a member of the tunour necrosis factor (TWF) family and induces member of the tunour necrosis factor (TWF) family and induces angiogenesis. TWEAKR may therefore be used to screen for and develop TWEAKR agonists and antagonists for the modulation of angiogenesis, to be used in the treatment and diagnosis of human disease. The disorders mediated by angiogenesis include ocular disorders characterised by ocular neovascularisation such as diabetic retinopathy, neovascular glaucoma, retinopathy of prematurity, retrolental fibroplasia, rubeosis, uveitis, macular degeneration and corneal graft rubeosis, uveitis, macular degeneration and corneal graft conclusions such as sarcomas and carcinomas, benign tumours and prenepplastic conditions such as sarcomas and carcinomas, benign tumours and prenepplastic conditions, myocardial angiogenesis, heading tumours and cornerations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modulating angiogenesis in a mammal for treating diseases mediated by angiogenesis, e.g. solid tumours and vascular deficiencies of cardiac peripheral tissue, by administering antagonist or agonist of TWEAK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC receptor polypeptides: APO4, APO6, APO8 and APO9 or their active (TMF) family CC receptor polypeptides: APO4, APO6, APO8 and APO9 or their active CC fragments, and isolated TMF related ligands 1 and 3 (TMRL1 and TMRL3) or CC their active fragments. APO4 is useful for diagnosing prostate cancer CC by determining levels of APO4 in an individual. Prostate cancer can also be treated using APO4 selective binding agents linked to a therapeutic CC molety. APO4 polypeptides are also useful for identifying selective CC binding agents, useful in diagnosis/treatment of disease by binding of CC agents to the polypeptide/active fragment which is extracellular, or CC expressed on the cell surface. The binding is preferably performed in CC vivo. APO4 polypeptides/active fragments are also useful for screening CC activity. Effective pharmacological agents useful in diagnosis or CC treatment of disease are also identified using APO4 polypeptides/active fragments are also useful in diagnosis or CC with a cytoplasmic domain of APO4 and detecting a change in level of APO4 activity. The method is performed in vivo or in vitro. APO polypeptides CC useful for diagnosis/treatment of developmental or gestational cC abnormalities. APO8 was transfected to human breast carcinoma cell line CC and the control of a APO4 were controled to the control of a APO4 control 
                                                                                                                                                                                                                                                                                                                                                                                               Align seg 1/1 to:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Percent Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diseases or immune responses to tissue grafts, or to stimulate or CC suppress the immune system. It is useful to screen for TRELL receptors: by labelling with a detectable label and screening CC compositions for binding. Agents interfering with TRELL-receptor CC binding can also be screened for, can then be administered, optionally with interferon-gamma, to induce cell death or CC reat, suppress or alter immune responses (especially involving human CC adenocarcinoma cells) involving a signal pathway between TRELL and its CC receptor. The DNA sequence can be used in gene therapy for CC TRELL-related disorders in mammals (especially humans), e.g. tumours, autoimmune and inflammatory diseases or inherited genetic disorders, CC amounts of a vector, e.g. a virus comprising a gene encoding TRELL. CC It may also be of use in the preparation of prepare probes for cand for anticage therapy. DNAs for TRELL-encoding sequences

This invention describes isolated Tumor Necrosis Factor (TNF) family Creceptor polypeptides: APO4, APO6, APO8 and APO9 or their active fragments, and isolated TNF related ligands 1 and 3 (TNRL1 and TNRL3) or their active fragments. APO4 is useful for diagnosing prostate cancer by determining levels of APO4 is useful for diagnosing prostate cancer complete the polypeptides are also useful for identifying selective fragments of the polypeptides are also useful for identifying selective binding agents to the polypeptides are also useful for identifying selective complete. APO4 polypeptides are the ragment which is extracellular, or expressed on the cell surface. The binding is preferably performed in CC vivo. APO4 polypeptides/active fragments are also useful for screening composits and antagonists by binding and observing the changer in APO4 activity. Effective pharmacological agents useful in diagnosis or treatment of disease are also identified using APO4 polypeptides/active fragments are also agents useful in diagnosis or treatment of disease are also identified using APO4 polypeptides/active fragments are also agents useful in diagnosis or treatment of disease are also identified using APO4 polypeptides/active fragments are also agents useful in diagnosis or treatment of disease are also identified using APO4 polypeptides/active fragments and APO4 signal transducer molecules that specifically interact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               developmental or gestational abnormalities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                developmental abnormality; gestational abnormalitity; prostate cancer; APO6; APO8; APO9; TNRL-1; TNRL-3; diagnosis; treatment; therapy; disea cytoplasmic domain; immunogen; antibody preparation; breast carcinoma;

                                                                                                                                                                                                                                                                The sequence is that of containing a BARD1 exon which can be used in the CC preparation of the recombinant breast cancer antigen, BRCA1, binding proteins BARD1, B123, BE21, BE14, BE31 or BE445, or a composition for the CC detection of a BARD1, B123, BE2, BE14, BE31 or BE445 nucleic acid sequence, specifically a wild type BARD1 composition for the detection or purification of BRCA1, useful to identify a patient having, or at risk of developing cancer. BARD1 can be used in the preparation of an anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the citers in binding protein agonist or antagonist that alters the binding of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or the binding of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or BE31 or BE445, a specific anti-BARD1 antibody can be used to identify a patient having or at risk of developing cancer.

                                                                                                                                                                                                                                                                              The present sequence is a putative coding sequence for a corn lecithin:cholesterol acyltransferase (also known as phosphatidylcholine-sterol O-acyltransferase). This enzyme is found associated with high-density lipoproteins and Apolipoprotein-Al and -D. The gene and protein can be used to produce transgenic plants which have increased lipid metabolism and membrane fluidity, and therefore increased resistance to heat and/or cold shock, to alter the content of phytosterol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Key

                                                                                                                                                                                                                       alignment_scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This cDNA sequence codes for murine JNK-interacting protein 1 (JIF-1, see AAWB1625), a novel cytoplasmic anchor protein that specifically binds to and inhibits the biological effects of JNK (c-Jun NH2-terminal kinase), including the initiation of apoptosis and oncogenic transformation. To isolate the clone, a yeast two-hybrid method was used to screen a mouse embryo cDNA library to identify proteins that interact with JNK. 7 Overlapping partial clones were isolated, and the full-length cDNA was subsequently . Obtained by screening a mouse brain lambda ZAPII cDNA hibrary. The invention provides JIP-1 nucleic acids and polypeptides, expression vectors and host cells. The JIP-1 polypeptide and nucleic acids (including antisense and ribozyme molecules) can be used in the manufacture of a medicament for treating a pathological condition associated with abnormal expression or activity of JNK, such as a neurodegenerative disease (selected from Parkinson's disease and Alzheimer's disease), a blood clot, stroke, malignancy, leukaemia, an autoimmune disease or inflammation (all claimed).

                                                                                                                                                                                                                                                                                                                     This invention relates to an immediate early herpes-simplex-virus type 2 (HSV-2) infected cell protein 4 (ICP4) recognised by human cytotoxic T cells. HSV-2 ICP4 protein is recognized by cytotoxic T-lymphocyte (CTL) cells in humans and is used in vaccines for therapeutically or prophylactically treating HSV infections. Pharmaceutical compositions of HSV-2 ICP4 protein may be used to treat patients suffering from HSV infections, to prevent or decrease recurrent herpes disease, frequency, severity and duration of episodes. The present sequence represents HSV-2 DNA encoding ICP4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immediate early herpes-simplex-virus type 2 (HSV-2) ICP4 protein is used in vaccines for therapeutically or prophylactically treating HSV infections -
                                                                                                                                                                                                                                                                                           Sequence

to the invention.

different promoter polynucleotide sequences. The expression vector, as a DNA vaccine is useful for treating a condition in an organism. The present sequence is human herpesvirus 2 complete DNA genome related

Consisting a nucleotide sequence encoding an cytokine expression vector), is useful virus (HSV), hepatitis C virus (HSV), influenza and respiratory syncytial virus (HSV), influenza and respiratory syncytial virus (HSV), influenza and respiratory syncytial virus (HSV), and coptionally comprising a nucleotide sequence encoding an consisting of bacterium, fungus, protozoa and virus such as human communodeficiency virus (HIV), herpes simplex virus (HSV), hepatitis C virus (HCV), influenza and respiratory syncytial virus (RSV), and coptionally comprising a nucleotide sequence encoding a cytokine (or a cytokine expression vector), is useful for inducing an immune response contains a sequence for granulocyte macrophage-colony stimulating factor (GM-CSF) or interleukin-12 (II-12). The polynucleotide sequences encoding the antigen and the cytokine are under transcriptional control of same or different promoter interleukinear and control of same or different promoters.

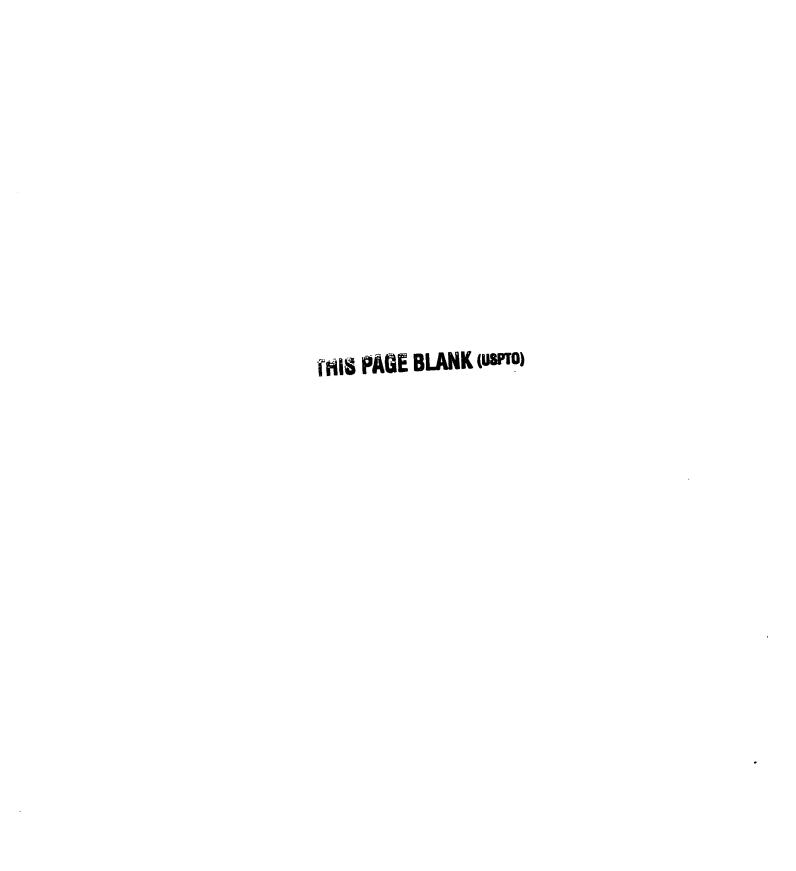

invention relates to a composition comprising an expression vector
